Question bank ID 71

The entire contents of the MAC address table are shown. Sales-4 sends a data frame to Sales-1. What does the switch do as it receives the frame from Sales-4?

Before

No source exhibit was verified for this candidate in the local export.

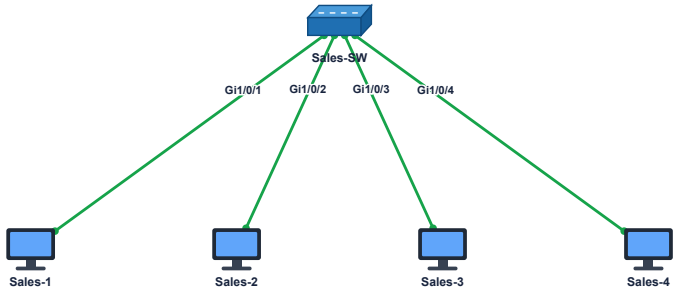

Images were not attached by filename alone because several numbered files do not match their mapped prompts.

After

Native exhibit already existed in the local project.

SALES VLAN 10 SWITCH TOPOLOGY

Sales-SW connects four hosts in VLAN 10.

Sales-SW — Terminal

```
Sales-SW#show mac-address-table
VLAN  MAC Address       Type     Port
10    000c.8590.bb7d    DYNAMIC  Gi1/0/1
10    3190.3456.9d3d    DYNAMIC  Gi1/0/2
10    00d0.d323.d343    DYNAMIC  Gi1/0/3
```

The original 51 candidates came from an October export. The live bank was checked on 2026-11-14; 46 of those rows had image URLs and five contained inline exhibit text, but attached images were not visually verified. New pages are local-only reconstructions from rows without image or inline exhibit data. No live records were changed.
